

WFM One — Release 20260519

This release delivers a comprehensive modernisation of the WFM One platform, spanning a fully rebuilt Display Management interface, migration of core administration dialogs, powerful new features for qualification and employee management, and a range of targeted improvements and bug fixes.

HIGHLIGHT

New Display Management

Display management has been **completely modernised** in this release, delivering a simpler, faster, and more intuitive experience for managing displays and screen content.

What's New

- Modern, intuitive user interface
- Powerful search and filter functions
- Centralised editing and configuration
- Preview functionality before saving
- Improved performance and faster loading
- Consistent design throughout the application

Benefits

- More efficient management of digital displays
- Better overview when managing many displays
- Faster navigation and editing
- Improved usability across all workflows

HIGHLIGHT

New Dialog Generation & Core Area Migration

Several central administration dialogs have been fully modernised and migrated to the latest standard interface, delivering consistent behaviour and improved performance across the platform.

Migrated Dialogs

- Planning Areas – Definition
- Planning Areas – Workplaces
- Workplaces – Qualifications
- Weekly Working Time Model
- Planning Area – Parameters
- Rule Checks
- File Upload / Import
- Employee Groups

New Dialog Standards

- Modernised usability
- Improved filtering and search
- Consistent permission handling
- Better performance
- Unified design and behaviour

NEW FEATURE

Qualification Bundles

This release introduces **Qualification Bundles**, allowing multiple related qualifications to be grouped and assigned collectively to employees.

Features

- Create, edit, and delete qualification bundles
- Manage multiple qualifications within a bundle
- Define a primary qualification
- Configure rules within a bundle
- Assign or remove bundles for employees

Special Behaviour

- Included qualifications are automatically applied
- Bundle qualifications are visible in the employee qualification grid
- Bundled qualifications cannot be removed individually from an employee

NEW FEATURE

Employee Master Data Enhancements

New "Messages" Tab

A new **Messages** tab centralises communication history per employee, covering Email, SMS, and WhatsApp. Includes status badges in the grid, detailed message view, structured technical response information, and improved duplicate handling.

New Bulk Actions

Three new bulk action types have been added: **Assignment Workplace**, **Organisational Unit**, and **Manage Qualifications**. The Manage Qualifications bulk action supports updating priorities, setting initial assignment dates, managing expiration dates, and restricting updates to existing qualifications only.

Bulk Action Feedback

After execution, users receive detailed feedback covering updated entries, newly created entries, and skipped entries — ensuring full transparency over bulk operations.

NEW FEATURE

Training Management: Excel Import

A new **Excel import** has been introduced for training management, enabling training data to be imported directly via Excel files.

Standardised Structure

A consistent import format ensures reliable and predictable data transfer into the training management module.

Simplified Transfer

Training data can now be loaded directly from Excel, removing the need for manual entry and reducing the risk of errors.

Future-Ready Foundation

The import structure is designed as a foundation for future format extensions, supporting long-term scalability.

Planning & Dashboard Improvements

1

Dashboard Filter Logic

Enhanced filter logic enables more targeted analysis and evaluation of displayed data across dashboards.

2

Configurable View Visibility

Visibility of views in operational planning can now be controlled through permissions, allowing different roles to see only relevant views.

3

Improved Resize Function

The resize functionality for activities and shifts has been improved, preventing incorrect times or accidental full-day assignments.

4

Planning Areas – Definition

Fully modernised with an interactive tree structure, inline editing, drag & drop support, hierarchical sorting, and a progress indicator during recalculation.

Administration Dialog Improvements

Planning Areas – Workplaces	Integrated search, full hierarchy path, linked qualifications display, toggle between workplaces and qualifications, quick expand/collapse mode.
Workplaces – Qualifications	Completely modernised and integrated as a native interface, replacing the previous iframe-based solution.
Rule Checks	Consistent filtering, improved date handling, enhanced usability, modernised interface, and optimised localisation.
Weekly Working Time Model	Sortable/filterable tables, create/edit/delete, layout persistence per user, permission handling, extended model parameters.
Planning Area – Parameters	Improved filtering, optimised display of long parameter names, tooltips, improved input forms, and optimised scrolling.
Employee Groups	New administration dialog — groups can now be viewed, edited, maintained, and deleted.
File Upload / Import	Fully modernised and integrated, with improved qualification imports, duplicate handling, and more robust processing.
Vacation Permissions	Sections only displayed if permission exists; unnecessary permission errors avoided; editing properly linked to edit permissions.

BUG FIXES

Bug Fixes

Several issues have been resolved in this release, improving reliability across employee management, vacation handling, and user profiles.

→ **Employee Creation: Dropdowns & Master Data**

Duplicate master data is no longer created, cost centres load correctly, and dropdown assignments work reliably again in the "New Employee" dialog.

→ **Partial-Day Vacation Requests**

An issue where partial-day vacation requests were incorrectly stored as full-day vacations has been resolved.

→ **User Profiles: Role Display**

New roles now correctly use the proper display name in user profiles.

→ **Employee Master Data: Column Selection**

Issues with column selection and sorting have been resolved — the configuration now works reliably again.

Release 20260519 — Summary

This release represents a significant step forward in the modernisation of WFM One, touching every major area of the platform.

8

Dialogs Migrated

Core administration areas fully modernised to the latest standard interface.

5

New Features

Qualification Bundles, Messages Tab, Bulk Actions, Excel Import, and Display Management.

4

Bug Fixes

Resolved issues in employee creation, vacation requests, role display, and column selection.
